

Diesel Dynamics Ltd

Diesel Dynamics Ltd was established in August 2014, with its operations hub based at the Hethel Engineering Centre in Norfolk. The company specialises in providing dual-fuel solutions for diesel-engine applications including agricultural machinery, plant, commercial vehicles, generators and marine craft engines.

Identifying a gap in the market, Diesel Dynamics applied to the Eastern Agri-Tech Growth Initiative for a Research and Development Grant of £37,010 to research an alternative fuel source for diesel vehicles, which would reduce the reliance on mineral fuels, exploit farm and food waste more effectively and be more cost-effective.

Vision

To prove that biogas can be used as a cost-effective, and commercially viable alternative fuel source for diesel vehicles and generators within the agricultural sector.

George Kohler, Operations Director of Diesel Dynamics Ltd, commented:

“Diesel Dynamics Ltd are genuinely delighted to have secured Agri-Tech support for our business. The financial and reputational backing this funding provides will enable us to deliver cost-effective and environmentally beneficial dual fuel solutions to operators of diesel-powered equipment in the agricultural sector and beyond.”
